## **IPsiG**

*International Institute for Gestalt Therapy and Psychopathology*

[www.ipsig.it](http://www.ipsig.it)

Directors: Gianni Francesetti, Michela Gecele

The **International Institute for Gestalt Therapy and Psychopathology** was founded in Torino in 2016 and is rooted in the theory and practice of Gestalt therapy, in particular in those contemporary developments focused on a relational and field perspective in psychotherapy. The Ipsig is in continuity with the tradition and the further developments of this approach, in dialogue with the other therapeutic modalities and with current cultural, philosophical and scientific developments. The Institute is deeply rooted in the tradition of the phenomenological psychopathology and in the contemporary wide debate on diagnosis and clinical practice. It is part of an international network devoted to the advancement of Gestalt Therapy and its applications to clinical practice. Human suffering is understood as a creative expression of the relational field and therapy as the situation where the therapist's presence supports the transformation of pain into beauty, following the aesthetic criteria of the contact process.
